Wall Panels or soffit panels**

Petersen offers superior design versatility for soffit applications by providing the Flush panel in a variety of gauges and widths. Pre-formed profiles are effective solutions in soffit projects, and with the aluminum substrate can be ventilated for increased airflow capacity. Flush panels are roll-formed from .032 aluminum, .040 aluminum, and 24 or 22 gauge steel. Maximum panel length is 25' and minimum panel length is 4'.

Soffit J Channel is available for trim. Pencil ribs can be added for increased strength and aesthetics.

Venting is also available.
